Study Instruction

1. Open the box, and check the sample & accessories, then read the **Study Instruction**
2. Check the picture about **Connection** and **Working Principle**.
3. Read the **Product Manual** and **Chief Commands brochure**.
4. Connect the TFT LCD display with **MCU DEMO board**, plug the power supply 5V to 20V.
5. Read the **DEMO program**
6. Open the CD , and check the information about **Datasheet folder** and **other single files**.
7. Open the “Software” folder, install **“Toolbox” software**, **driver for miniUSB**, and **driver for RS232 converter**.

8. The important is the **“User Manual” folder**, study it as following sequence:

01- Assistant Software Manual	Connect the display with PC, open the software and start testing
02- Command Set	**(Important) the powerful instructions** that control our TFT Module.
03- Touch Control Software Manual	Build the **User Interface frame** and Define the **touch button**
04- Font software Manual	Create the **font file**, refer to the **Unicode table** of your Character
05- Demo folder	**(Important) Example** for User Interface and program
06- Development Guid	Program cases as reference.
07- SD Downloading	Use SD cards for **batch downloading** as production. Convenient!

9. Try to design **a simple group** of User Interface for practice
10. Try to use commands to write a **simple control program** for your MCU in **the language of C, C++, assembly**.
11. Design a **completed group of User Interface and control program** according to your **practical application**.
12. Make the **prototype** and start **testing**.
